Making predictions

...

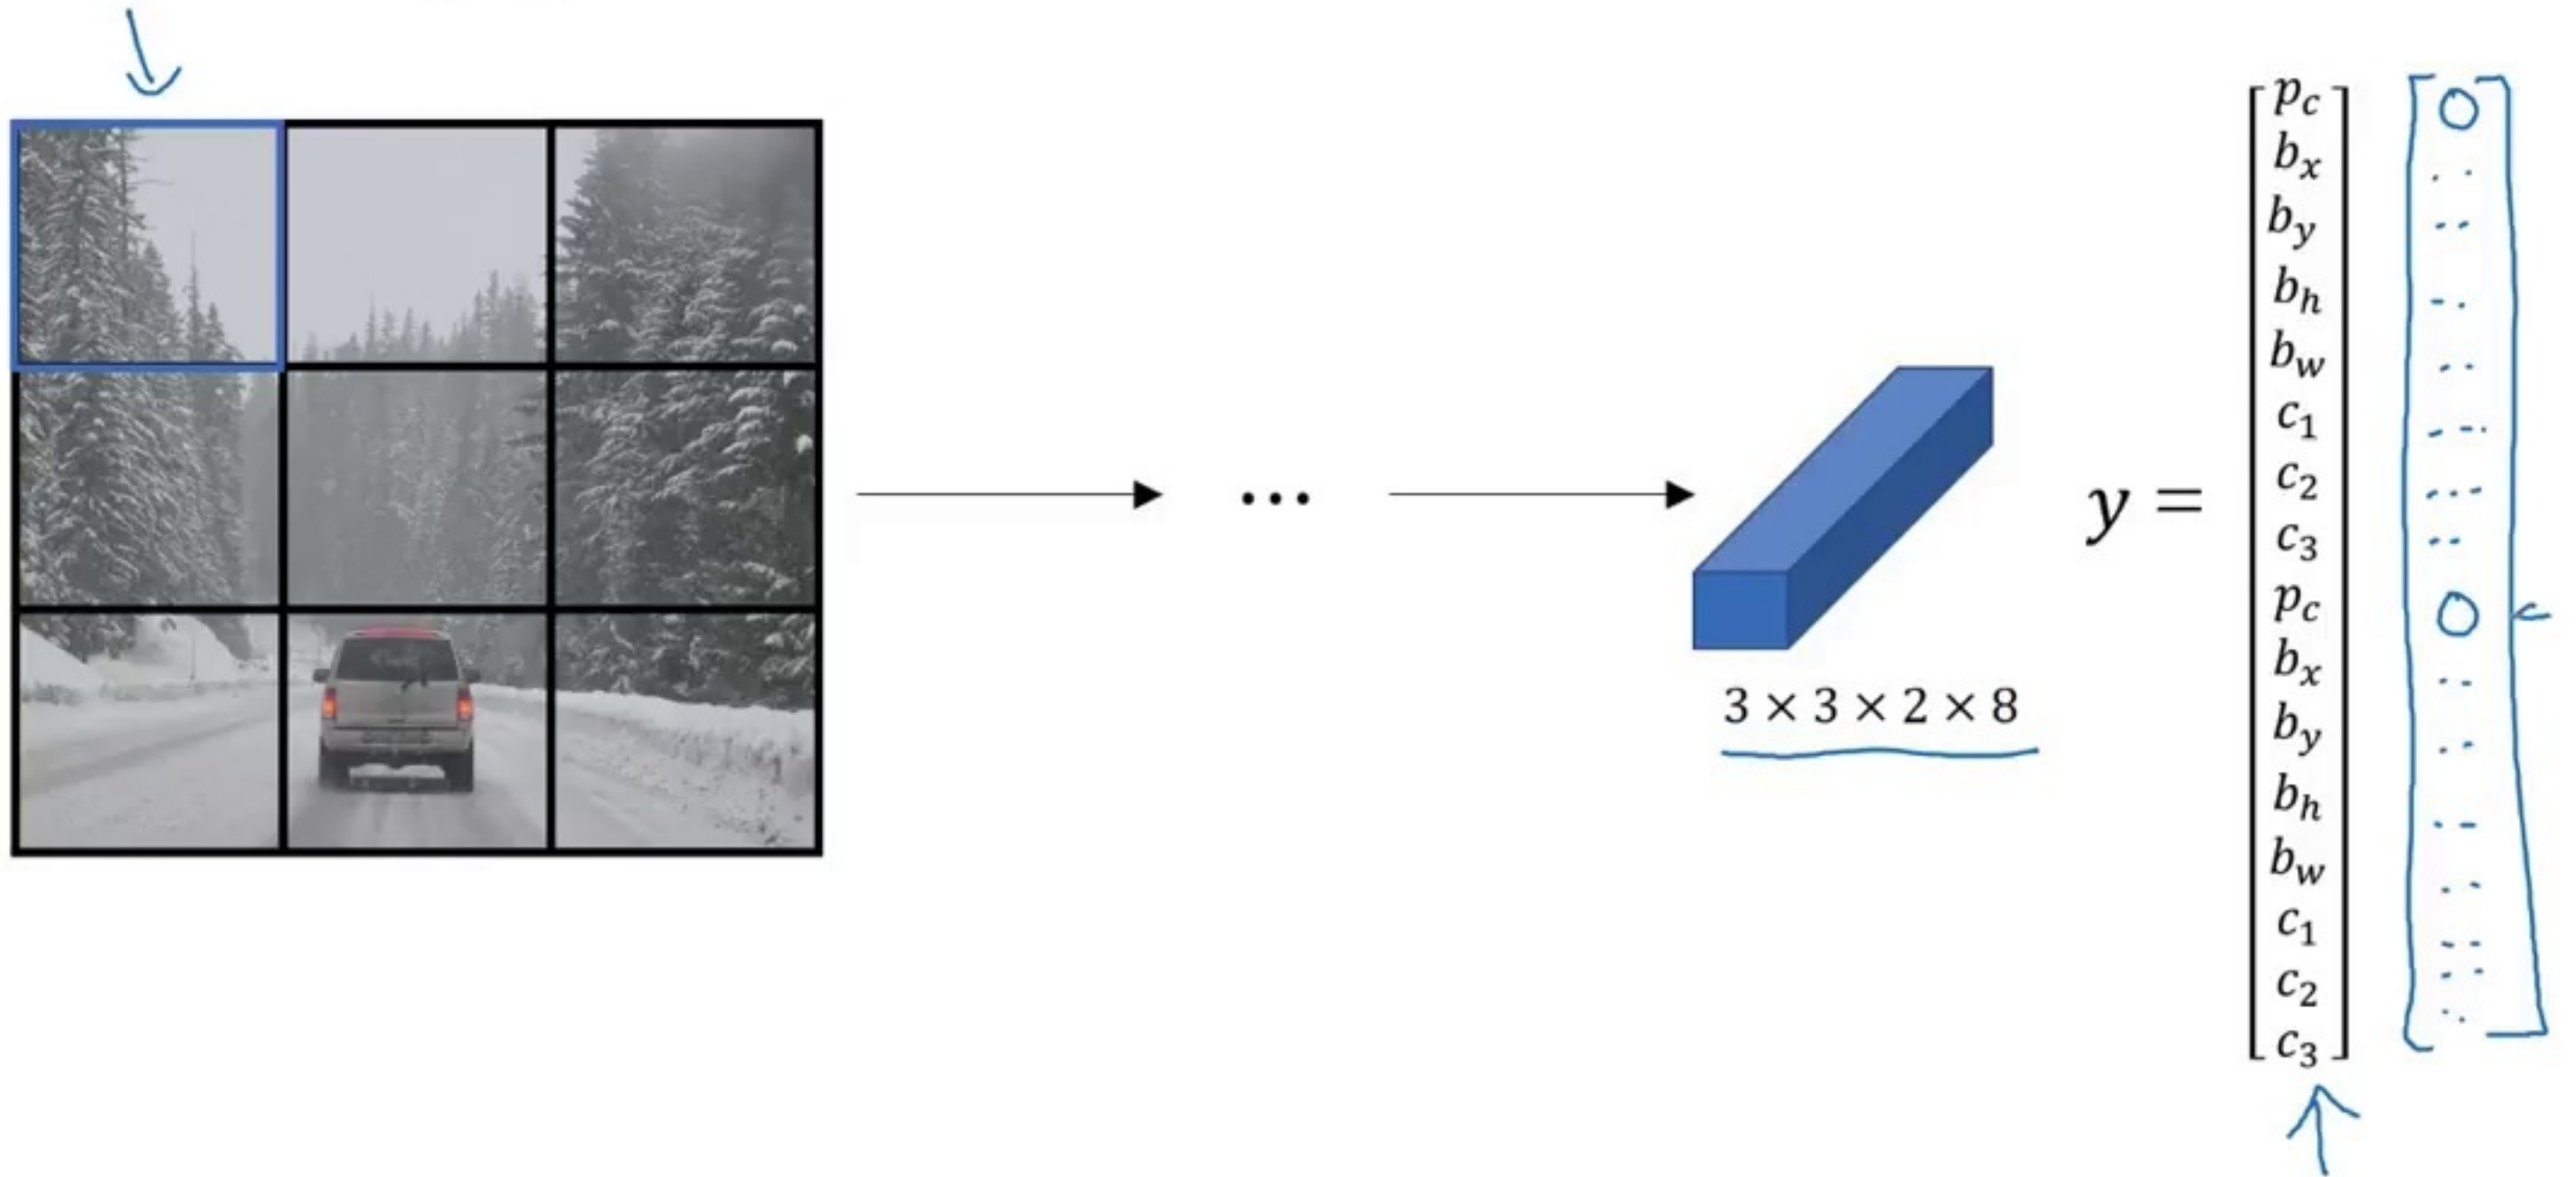

$3 \times 3 \times 2 \times 8$

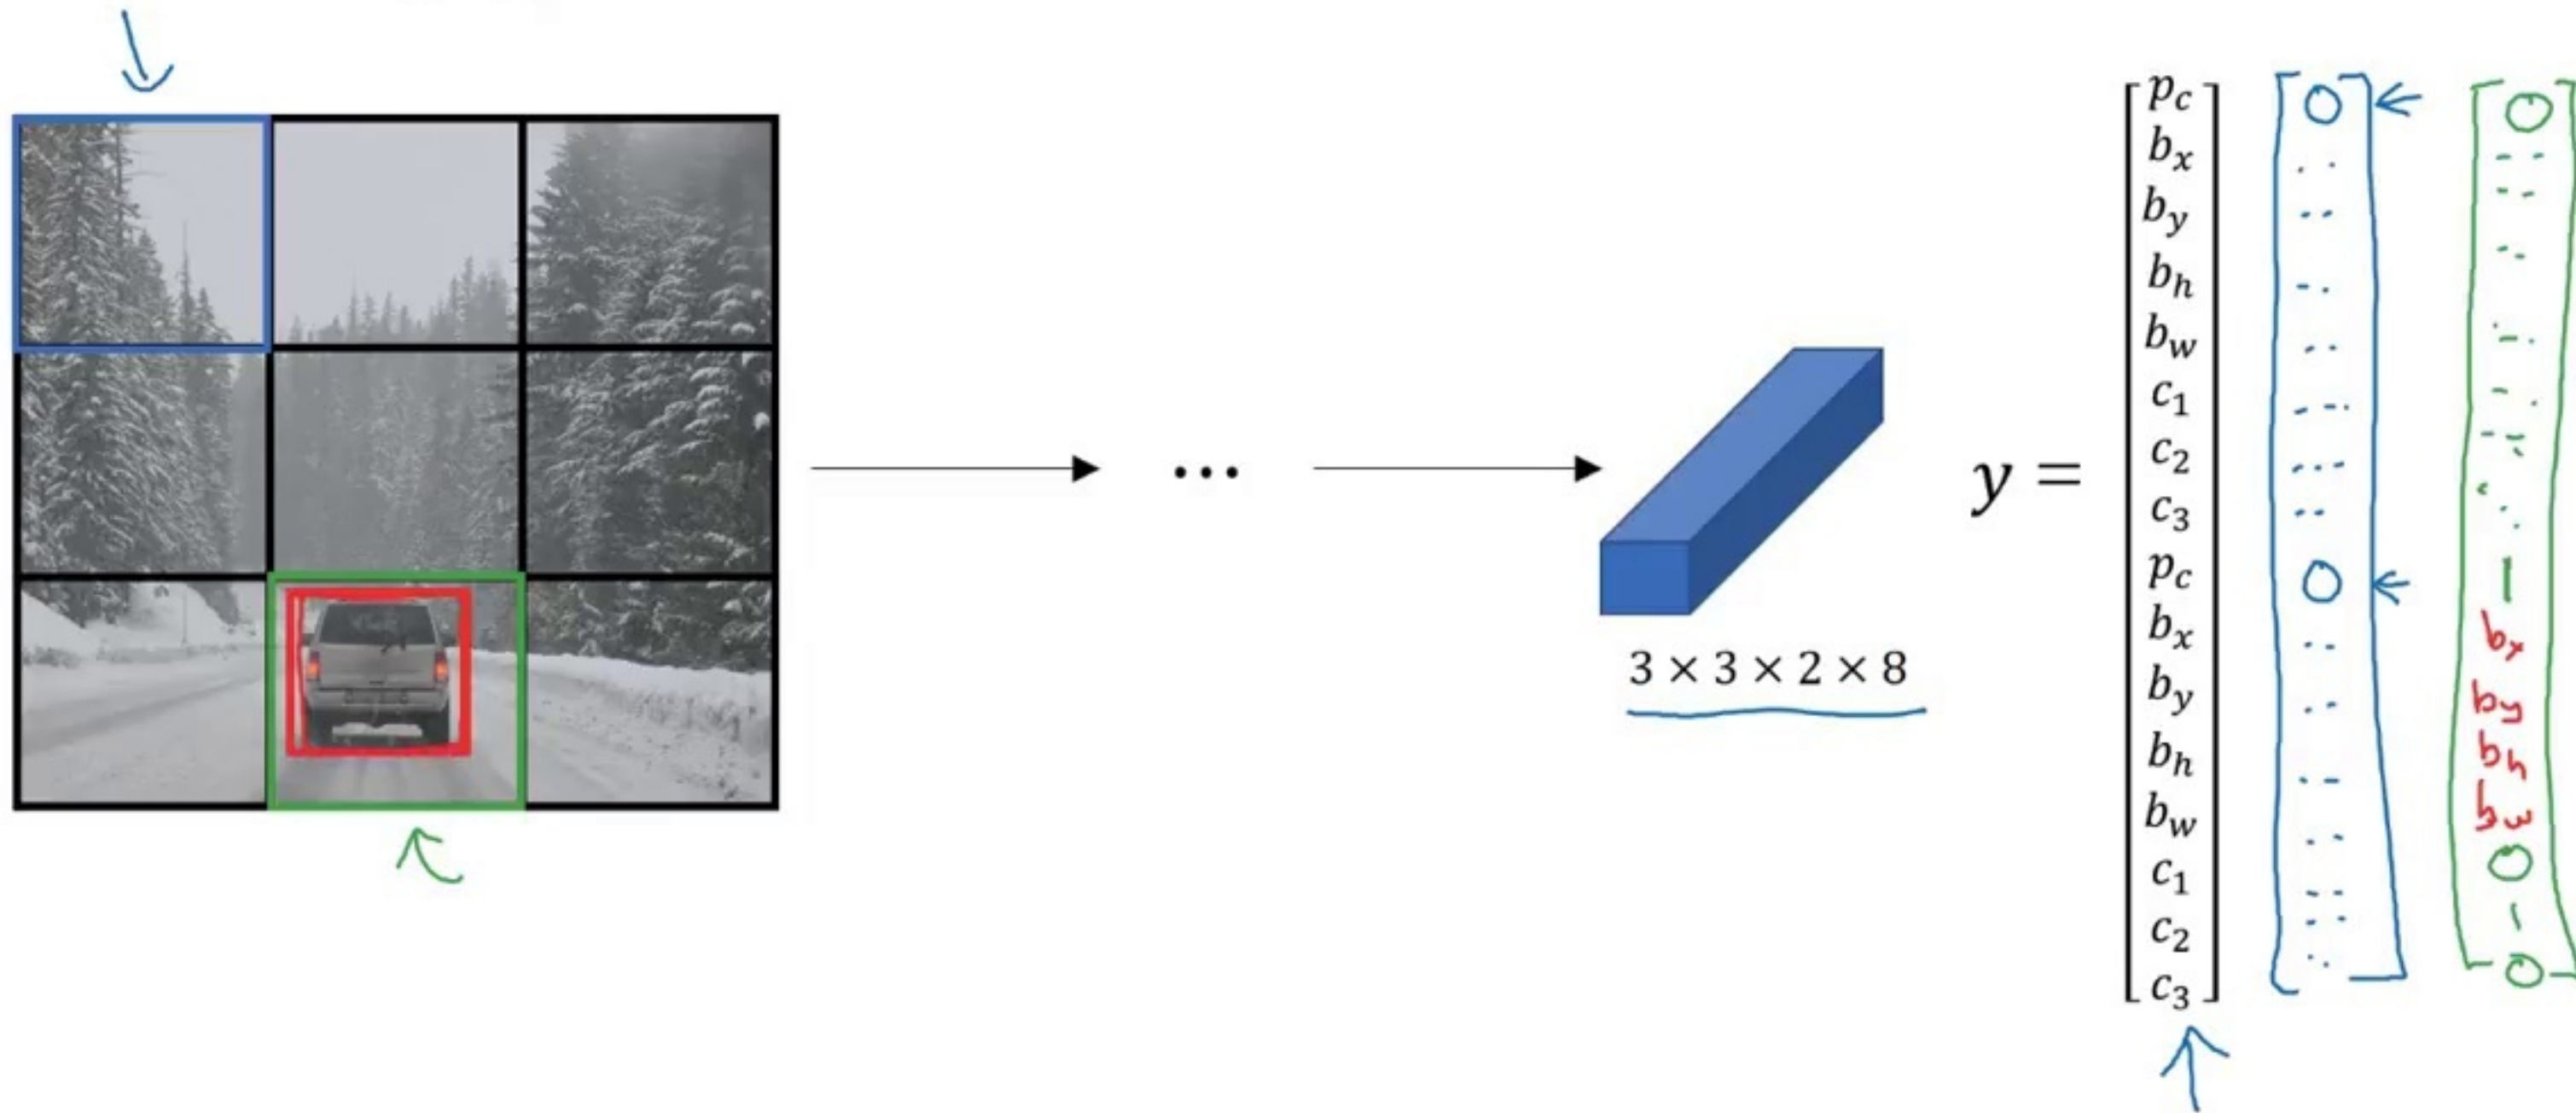

$y =$

$$\begin{bmatrix} p_c \\ b_x \\ b_y \\ b_h \\ b_w \\ c_1 \\ c_2 \\ c_3 \\ p_c \\ b_x \\ b_y \\ b_h \\ b_w \\ c_1 \\ c_2 \\ c_3 \end{bmatrix}$$

Making predictions

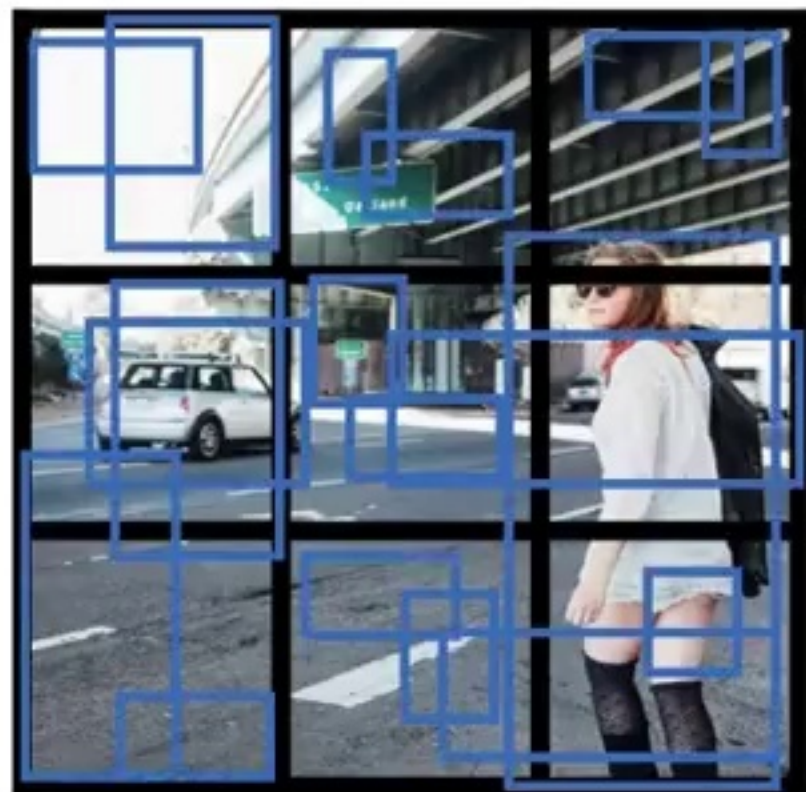

Making predictions

Outputting the non-max suppressed outputs

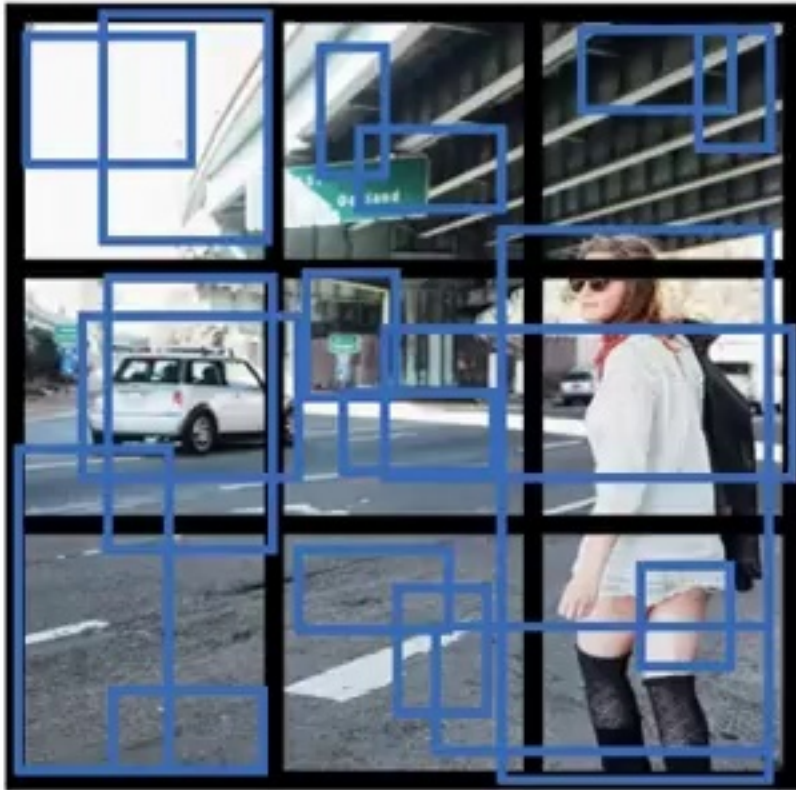

Outputting the non-max suppressed outputs

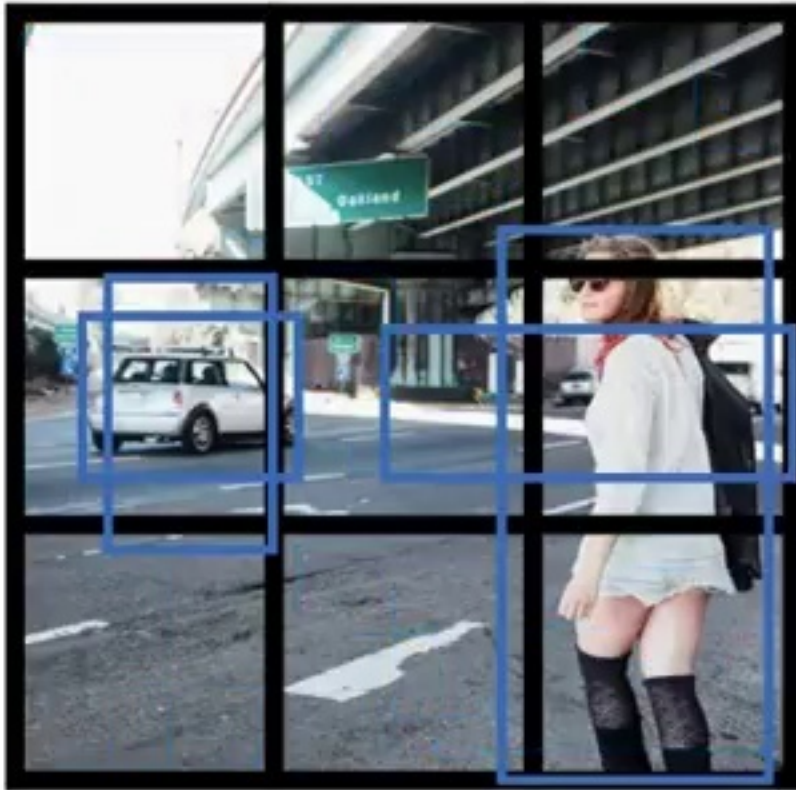

- For each grid cell, get 2 predicted bounding boxes.

Outputting the non-max suppressed outputs

- For each grid cell, get 2 predicted bounding boxes.
- Get rid of low probability predictions.

Outputting the non-max suppressed outputs

- For each grid call, get 2 predicted bounding boxes.
- Get rid of low probability predictions.

Outputting the non-max suppressed outputs

- For each grid cell, get 2 predicted bounding boxes.
- Get rid of low probability predictions.
- For each class (pedestrian, car, motorcycle) use non-max suppression to generate final predictions.

Outputting the non-max suppressed outputs

- For each grid cell, get 2 predicted bounding boxes.
- Get rid of low probability predictions.
- For each class (pedestrian, car, motorcycle) use non-max suppression to generate final predictions.
